

Cascade Inspection Services

Deck – requirements for permit

1. Permit Application
2. Site Plan
3. Construction drawings (3 sets) must include:
Footing detail, post locations, carrier size and joist size and spacing

Please review the attached informational sheets. These outline some of the common code requirements for building a deck. For your convenience, a sample site plan and deck detail are included.

Plans must be dropped off in the municipality where the work is being done for zoning approval. Once approved, we will review for code compliance and issue a permit. In most cases, a footing inspection and final are the two required inspections. The cost (including inspections) is \$175.

For more information, please contact the Building department at 616-949-3765.
